

Streamline Your Manuscript Submission, Peer Review, and Editorial Processes

Peer X Press (*PXP*) is a hosted Web-based peer-review and editorial-management service that allows publishers to offer their authors, reviewers, editors, and staff a number of convenient, time-saving functions:

- Online submission and viewing of abstract or manuscript files
- Web access to pertinent editorial-process tracking data
- Electronic tools to conduct the peer-review process
- E-mail alerts and confirmations
- Editorial management reports
- Direct transfer of accepted files and data to other AIP services
- Tools for abstract scheduling and for article lineup

PXP is securely hosted and accessible at all times via a Web browser. At the core of the service is the feature-filled, highly configurable eJournal Press software. *Peer X Press* integrates seamlessly with AIP's production and composition services and with its online hosting service, *Scitation*®.

PXP'S POWERFUL FEATURES SPEED TIME TO PUBLICATION

The convenient and easy-to-use features of *Peer X-Press* (*PXP*) provide tracking and processing throughout the editorial workflow: author submission, reviewer selection, review submission, revision, and approval. Editors, authors, reviewers, and staff are permitted to access individual manuscripts according to their assigned role and the workflow stage of the manuscript.

Each *PXP* site can support one of a number of publication types: journal manuscripts, meeting abstracts, conference papers, or book chapters. It can also manage workflows where authors themselves prepare the final publication.

Submit Manuscripts Online. . . Your authors can upload manuscript source files—both article-text and separate graphics files—via a web browser. Authors may also upload supplemental material and multimedia files.

Choose Reviewers. . . *Peer X-Press* has the flexibility to either automatically assign an editor to oversee the peer-review process for a manuscript (e.g., by subject matter), or allow the editor-in-chief or editorial staff to designate the editor. The assigned editor may consult a database of eligible reviewers that is searchable by name, expertise, institution, and keyword. In addition, a one-click search function can match expertise keywords with the manuscript's topical keywords.

“Thank you for helping make our journey to PXP for *Electrochemical and Solid State Letters* as easy as it could possibly be. Our experience in making the transition has been excellent. . . The system is a wonderful addition to our online journals.”

— Mary E. Yess
Director of Publications
Electrochemical Society

Revise Manuscripts. . . *PXP* enables your editors and staff to select, check, and send the appropriate decision letter from their own set of custom letters, including attachments if desired. Revised and re-submitted articles retain the manuscript and related summary data from the original version.

Track Manuscripts. . . For editors and staff, *PXP* sorts and organizes manuscript records into folders labeled according to major workflow categories. *PXP* collects all manuscripts that are under active consideration, and provides a convenient summary of workflow-activity information. Editors and staff can easily track each manuscript's current stage; see a historical log of all transaction events and links to editorial notes regarding the manuscript and to all system e-mail messages related to the manuscript.

Inquire About Manuscript Status. . . *PXP* gives corresponding authors the ability to check the status of their submitted manuscripts. In addition to their uploaded source files, authors may download the same PDF files that are presented to editors and reviewers. Authors may also access data and files for past manuscripts that have received final decisions.

Submit Reviews Online. . . Reviewers are able to access PDF article-text and figure files for the manuscript as soon as they accept an assignment. The review reports can be filled in online or completed offline in a word processor, and then either pasted into the online review form, directly uploaded, or submitted as an e-mail attachment. Reviewers receive e-mail copies of their reports.

Generate Reports. . . Journal staff and editors manage the performance of the editorial process with an ever-growing collection of dynamically generated, tabular data reports, available on screen and as Excel file downloads.
